SUMMARY

CS undergraduate (CGPA 9.96, IIIT) passionate about building developer communities and driving data-driven decision making. Active member of AI-TRONICS Club with hands-on project experience in software engineering, machine learning, and computer vision (VisionSense), as well as full-stack development (NutriGenAI). Eager to contribute to technical initiatives and collaborate in an Agile environment.

EXPERIENCE

Member

2020 – 2025

AI-TRONICS Club, IIIT

- Actively engaged in AI/ML discussions and applied technology projects within a developer community setting
- Collaborated with peers on technical problem-solving and knowledge-sharing sessions
- Improved project completion rate by 30% through optimized project management
- used Java and REST APIs to drive project development, leveraging client-server architecture and NoSQL databases for efficient data storage and retrieval.
- Participated in the SNAPCHAT AR event, creating an AR video effect that showcased technical skills
- Enhanced community engagement by attending discussions and collaborating with peers on technical projects

Software Engineering Virtual Experience

May 2025 – Aug 2025

JPMorgan Chase - Forage

- Built backend REST APIs in a simulated enterprise environment
- Worked with event-driven concepts, in-memory databases, and Git-based development workflows to build scalable backend services.
- Implemented Kafka and H2 memory setup to build scalable backend REST APIs
- Developed and deployed an application used by 100 users, enabling them to track their calories using a large dataset of food and randomly generated meals
- used Java to build REST APIs, working independently as a team of one to overcome technical challenges
- Optimized the application using in-memory databases, resulting in improved performance

EDUCATION

Jaypee Institute Of Information Technology

Bachelor of Technology in Computer Science

CGPA 9.96/10.0

Gyanshree School

XII, CBSE

Grade 96.25%

Gyanshree School

X CBSE

Grade 97.4%

PROJECTS

NutriGenAI

Developer

- Built an end-to-end personalized diet planning system that generates meal recommendations using user goals, BMI, dietary preferences, and health constraints
- Designed a feature-driven recommendation pipeline combining domain rules with data-driven scoring to generate nutritionally balanced diet plans
- Implemented input feature engineering (BMI ranges, calorie targets, dietary constraints) to structure user data for recommendation logic
- designed the system with clear separation of concerns (UI, recommendation logic, data layer) to support future ML model replacement without UI changes
- Built a production-ready Android UI with onboarding, profile setup, and real-time diet updates

VisionSense

Developer

- Developed a real-time hand gesture recognition system using webcam video streams with low-latency inference
- Implemented landmark-based feature extraction from hand keypoints to classify gestures such as open palm, fist, heart, thumbs up, thumbs down and dynamic movements
- Designed a custom gesture classification logic on top of extracted spatial features rather than raw pixel inputs
- Optimized the inference pipeline to achieve 20–30 FPS real-time performance on consumer hardware
- Built an extensible gesture framework supporting confidence scoring and visual overlays for interpretability
- Built with modular, well-commented codebase , designed for demo and workshop use within developer community settings

SKILLS & AWARDS

Technical Skills: Java, Python, C++, JavaScript, React, Node.js, Express, MongoDB, Git, OpenCV, C, HTML/CSS, MySQL, Firebase, Android Studio, MediaPipe, Object-Oriented Programming

Awards: Merit-Based Haldiram Scholarship
